

City of Roseville Creek and Riparian Management and Restoration Plan

City of Roseville Community Development Department

A sunny day at Secret Ravine, one of the creeks in the City of Roseville.

Award Amount
\$228,470

Watershed
Dry Creek and Pleasant Grove Creek Watersheds

County
Placer County

CALFED Region
Sacramento Valley Region

Legislative Districts
US Congress: 4
State Assembly: 4
State Senate: 4

Purpose

To develop a comprehensive creek and riparian management and restoration plan for City of Roseville creeks.

Project Goals

- Engage the community and identify stakeholders' issues and values.
- Develop a plan for the City's creeks that balances public health and safety needs with natural resource functions.
- Identify and prioritize riparian restoration projects.
- Establish a long-term public outreach program that fosters partnerships and builds community capacity to implement the Plan.
- Increase community water conservation to improve water supply reliability.

Benefits to the CALFED Program

The City of Roseville is an integral part of the CALFED solution area as well as one of the fastest-growing communities in the Sacramento Valley region. Implementation of the Plan will produce measurable results for typical urban watershed stressors such as flooding, stormwater quality, erosion, and siltation. The result is improved wildlife habitat, water quality, and overall watershed health both in Roseville and in the Bay-Delta. The Plan will enhance local capacity to manage watersheds through actively involving community members in the stakeholder process. The project's community water conservation plan will help the Water Use Efficiency Program meet their goal of increasing urban water conservation measures.

Project Overview

The City of Roseville has 38 miles of creeks in two watersheds that drain into the Sacramento River. Using a consensus-based approach, the City is developing a management plan for these watersheds. Implementing the Plan will benefit the ecosystem and enhance the community's capacity to make better land use decisions.

Development of the City of Roseville Creek and Riparian Management and Restoration Plan (Plan) is coordinated with other watershed planning and restoration projects undertaken by Placer County, the Dry Creek Conservancy, the Dry Creek Watershed Council, and the City of Roseville. Together, they are producing a comprehensive creek and riparian management and restoration plan suitable for adoption by the City of Roseville. The Plan also promotes specific watershed conservation, maintenance, and restoration actions by developing a comprehensive restoration strategy for the City's creek and riparian areas.

The other major component of the Plan is the establishment of a long-term public outreach program to foster partnerships with complementary organizations and build community capacity to implement the plan successfully. Outreach materials educate the community about the CALFED Program and sound watershed stewardship principles, including how local land management practices affect city creeks and, in turn, the Bay-Delta system. Increasing community water conservation to enhance local water supply reliability is an additional goal of the outreach program. Both treated water and runoff drain into local creeks. Reduction in water use results in reduced runoff and reduced need for wastewater treatment, improving water quality for the watersheds as well as the Bay-Delta.

Project workshop attendees discuss City of Roseville creeks.
